

Firmware for the Mu3e Filter Farm

Marius Köppel on behalf of the Mu3e collaboration

Institute for Nuclear Physics, JGU Mainz

22.03.2023

Mu3e Motivation

SM with ν oscillation Br: $< 10^{-54}$

- Search for Lepton Flavor Violation
 $\mu^+ \rightarrow e^+ e^- e^+$
- Current limit (Br $< 10^{-12}$) set by SINDRUM (1988)

Paul Scherrer Institute (PSI)

- Muon beam of $10^8 \mu/s$
- One year of data taking
- Sensitivity up to one in 10^{15}

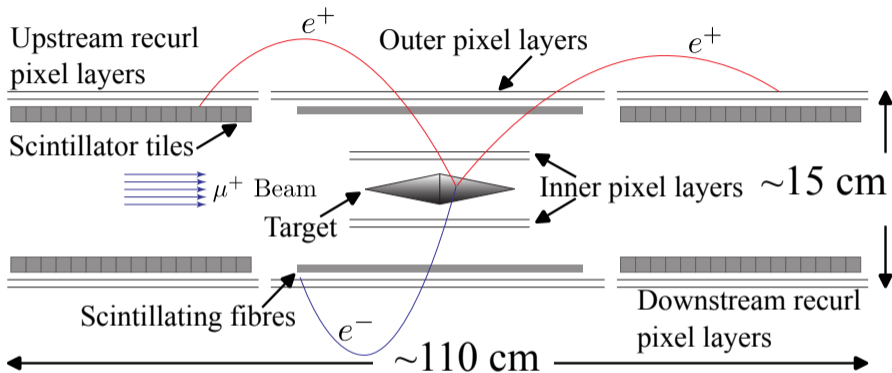

Mu3e Signal & Background

- $\sum p_e = 0$ and $\sum E_e = m_\mu$
- μ^+ decay at rest
- Good vertex and time resolution

3 tracks \rightarrow need of online reconstruction

Mu3e Detector Concept

- Magnetic field of 1 T

- μ^+ stops at the target \rightarrow decay at rest

High Voltage Monolithic Active Pixel Sensors

- Thinned down to 50 μm
- Fast charge collection

sensor: 20 x 20 mm² pixel 80 x 80 μm^2 ²

- Time resolution of a few ns
- Digitalization and zero suppression on the chip

→ up to 3 links of continuous 1.25 Gbit/s unsorted hit data

¹Ivan Perić et al., NIM A582 (2007) 876-885

²HV-MAPS T 147.3

electro-weak sector

Search...

Tube (L = 1.1m to 2m, Ø = 16cm) in
magnetic field of 1T
sensitive for recurling tracks

Scintillating tiles

Timing: 70ps

- Fibre < 500 ps time resolution

- Tiles < 70 ps time resolution

1 of 1

→ Readout via SiPM digitized via MuTRiG³ chip, 1.25 Gbit/s unsorted hit data

4 Conclusion & Outlook

Mu3e DAQ

Mu3e DAQ

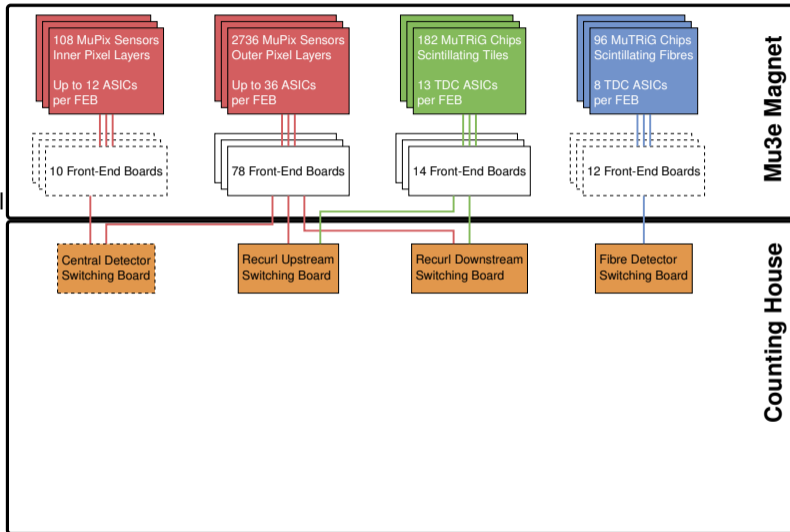

up to 3 x 1.25 Gbit/s
LVDS links per ASIC

Mu3e DAQ

up to 3 x 1.25 Gbit/s
LVDS links per ASIC

1-2 x 6.25 Gbit/s optical
link per board

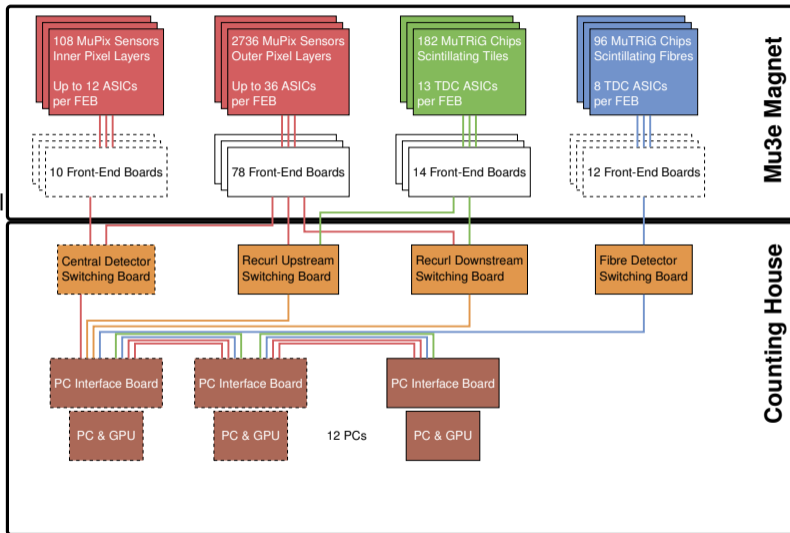

Mu3e DAQ

up to 3 x 1.25 Gbit/s
LVDS links per ASIC

1-2 x 6.25 Gbit/s optical
link per board

2-8 x 10 Gbit/s optical
links per board

16 inputs per Farm
FPGA

Mu3e DAQ

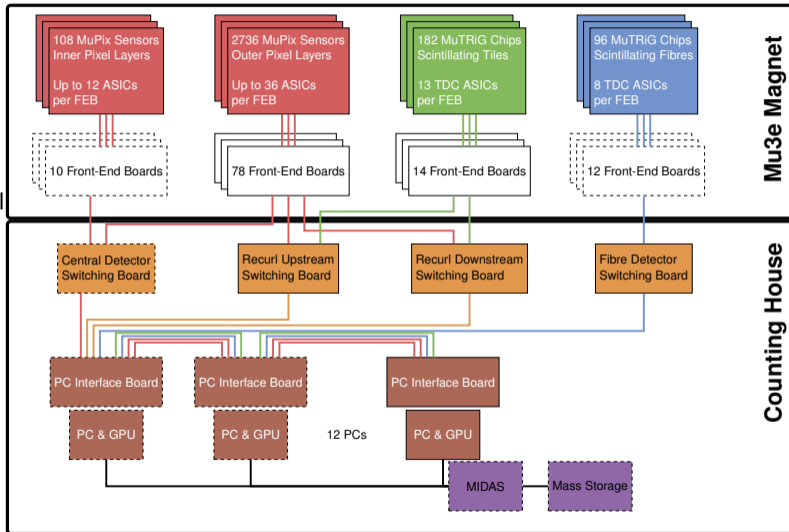

up to 3 x 1.25 Gbit/s
LVDS links per ASIC

1-2 x 6.25 Gbit/s optical
link per board

2-8 x 10 Gbit/s optical
links per board

16 inputs per Farm
FPGA

Gbit Ethernet

Mu3e DAQ

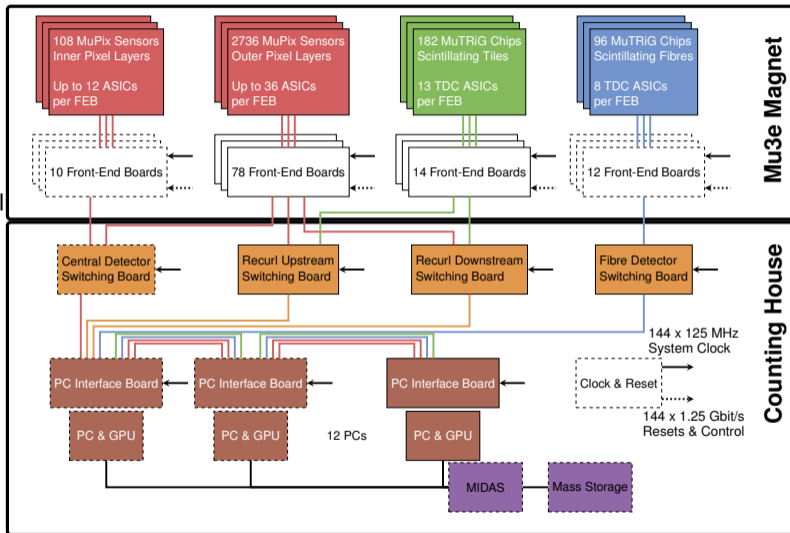

up to 3 x 1.25 Gbit/s
LVDS links per ASIC

1-2 x 6.25 Gbit/s optical
link per board

2-8 x 10 Gbit/s optical
links per board

16 inputs per Farm
FPGA

Gbit Ethernet

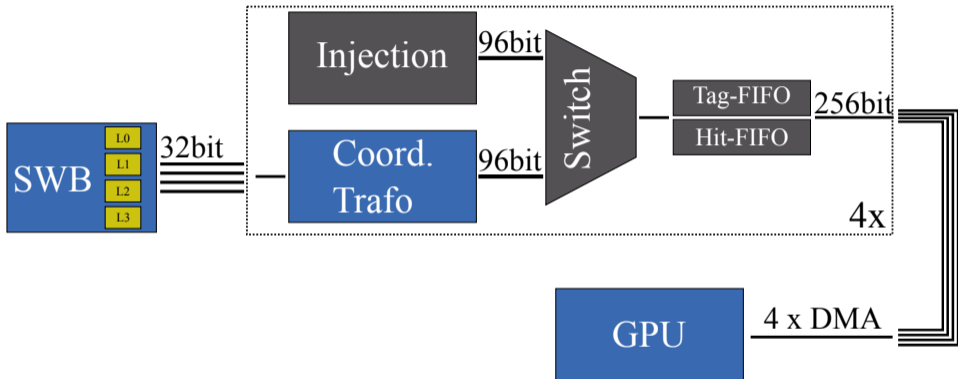

GPU PCs

- DESaNET receiving boards from Terasic
- Enough boards available and tested
- Potential host box bought (including GTX 2080Ti GPU)
- Rack infrastructure needed (5 racks, 4 of which water-cooled, see infrastructure session)

PC Interface FPGA Board Firmware

PC Interface FPGA Board Firmware

- Group hits from all layers into 0.5 MB
- All hits are sorted in 8 ns

RAM CPU					
GPU Block 0 - 2MB					
Layer 0	x y z	x y z	x y z	x y z	Pointers
Layer 3	x y z	x y z	x y z	x y z	Pointers
Time	8ns	16ns	24ns	n ns	
GPU Block 1 - 2MB					
Layer 0	x y z	x y z	x y z	x y z	Pointers
Layer 3	x y z	x y z	x y z	x y z	Pointers
Time	8ns	16ns	24ns	n ns	

- Time information by the pointers
- Collect 2 MB → send it off → streaming
- For GPU tracking → Do, 16:20 T 122.3

- 1 The Mu3e Experiment
- 2 Data Acquisition of Mu3e
- 3 Mu3e Cosmic Run 2022**
- 4 Conclusion & Outlook

Mu3e Cosmic Run

3m

Mu3e Cosmic Run DAQ

Scintillator panels

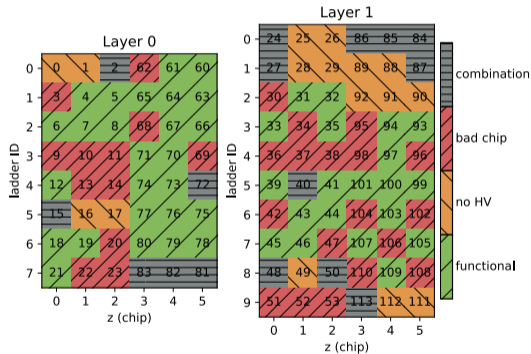

1 x Scintillating fibre ribbon

Inner pixel layers

Scintillator panels

Scintillator panels

Mu3e Cosmic Results

More on the Cosmic Run → Do, 16:05 T 112.2

- 1 The Mu3e Experiment
- 2 Data Acquisition of Mu3e
- 3 Mu3e Cosmic Run 2022
- 4 Conclusion & Outlook**

Conclusion & Outlook

- Testing full DAQ with beam data in 2024
- Integration of the GPU selection
- Final commissioning of hit synchronisation
