The Universe in a nutshell banknote

Abstract

On each banknote of the new series by the Swiss National Bank you can discover a Universe of little details. In particular, the 200 CHF bill reveals the history of the Universe itself, and how it is studied in modern physics. In this presentation, we will tell a story of stories: how the Universe evolved, how the Universe and modern physics tools were confined on a little piece of high-tech paper, and which questions had to be answered on the way towards the realization of this banknote.
