

# **What does it mean to be a radiometrologist at a university hospital?**

**Claude Bailat, PhD**

Institute of radiation physics, University Hospital (CHUV), Lausanne.

Radiometrology is performed in various institutions, such as PSI. In a clinical context, radiometrology can be seen as an extension of national metrology institutes or designated institutes. At IRA, radiometrology is performed at a primary and secondary level. It supports nuclear medicine as well as radiotherapy activities and developments.

I propose for this talk to give you an overview of the duties of the group of radiometrology. We will detail two or three research projects to show practically what is expected of radiometrologists in a clinical environment.
