

The ESRF Upgrade Program: Phase-I and EBS project

Dr. Michael KRISCH, ESRF

After a 15 year period of successful user operation, the ESRF launched its ambitious Upgrade Program in 2009. Upgrade Phase I was completed in 2015 and provided 19 new or refurbished beamlines and a substantial upgrade and renewal of facilities and support labs. The Extremely Brilliant Source (EBS) project was launched in 2015. At its heart is the construction of a new storage ring with a 100x higher brilliance and coherence. After a short introduction to the ESRF, the presentation will summarize the main achievements of the Upgrade Phase I and the status of the EBS project.
