FW-Release Notes SCS3000

V1.2.1

- Bug fix for setting the submaster name via display menu

V1.2

- Fixed a bug when submaster sending more than 255 bytes to clients/slaves
- Extended Rx timeout for client
- Corrected wrong time format in log entry string when day value is 18

V1.1

- Display User Variables
- Locking the screen is now implemented with pressing the PSI-Logo
- Support for new analog input cards SCS3000_CurrentIn and SCS3000VoltageIn
- Improved performance when reading / printing the log (use of tables)
- Turned parameter assertion off for StdPeriphDrivers to get more performance
- Use of compiler optimization level -O3
- Increased maximum reading log length over ethernet to 1024 bytes
- Reordered interrupt priorities
- Resolved „Cycle time violation" when SCS3000 is fully equipped
- Several minor improvments

V1.0

- Initial Release
