2. Beam schedules

The 600 MeV ring accelerator is scheduled for 36 weeks of high intensity beam production (~2mA) from April 16 to December 23, 2008 (see research schedule in the appendix). This period is divided up in 12 cycles of 18 days each of continuous beam production, interrupted by ~ 3 days of service, beam development and accelerator training.

As usual, the beam schedule 2008 will be regularly updated and is displayed on the internet:

- http://ltp.web.psi.ch/accelerator_and_beams/schedule.pdf for the general schedule
- http://lmu.web.psi.ch/facilities/schedules/musr-schedule_2008.html for μ SR details

3. FUNSPIN Beamlne

The FUNSPIN neutron beamline at the SINQ has been successfully used by particle physics experiments since 2001. This program is now soon coming to an end. This is also due to the near advent of the UCN facility, where new fundamental neutron physics experiments are prepared. Users who still need the FUNSPIN beamline for finalizing their measurements are urged to hand in any further requests as soon as possible. The intentional deadline of using the FUNSPIN facility is by the end of 2008.

4. Varia

The next meeting BV 40 is scheduled for February 18 - 20, 2009. The first day is reserved for reviews of $\mu\gamma$ and UCN. The **deadline** for beam requests, new proposals and addenda is **January 19, 2009**. Users are requested to make electronic submissions of their documents (PDF Files).

The dates for the next meeting BVRA-2009, are not settled yet.
