Beam Request for Pion-Irradiation

R-10-02.0 Pion induced Change of Material Parameters in Silicon
T. Rohe, *PSI, INFN, CERN, Santa Cruz*
Approved, 3 weeks in π E1 area.

2. Beam schedules

The 600 MeV ring accelerator is scheduled for 34 weeks of high intensity beam production from April 30 to December 23, 2010 (see research schedule in the appendix). The primary beam intensity will be tuned to 2.2 mA, with some peak intensity shifts up to 2.4 mA. Due to the installation of a new ion source, the basic operation structure will be enlarged from three-week to four-week long cycles, which results in less interruptions for maintenance and beam development, see

<http://abe.web.psi.ch/schedule/yearplan2010.php>

As usual, the beam schedules 2010 will be regularly updated and are displayed on the internet:

- http://ltp.web.psi.ch/accelerator_and_beams/schedule.pdf for the general schedule
- http://lmu.web.psi.ch/facilities/schedules/musr-schedule_2010.pdf for μ SR details

3. Use of π E3 beam for future Highfield μ SR facility

The Highfield μ SR project will require a total reconstruction of the π E3 beam and area into a dedicated beam facility. The 10 Tesla magnet is on order and scheduled to be delivered next November, with first commissioning tests in π E3 in December 2010.

The experiments using presently the π E3 beam were notified that beam and area are no more available after end of 2011. Since the π E1 beam may be suitable as a future replacement, a corresponding beamtest has been allocated in early September 2010.

4. Varia

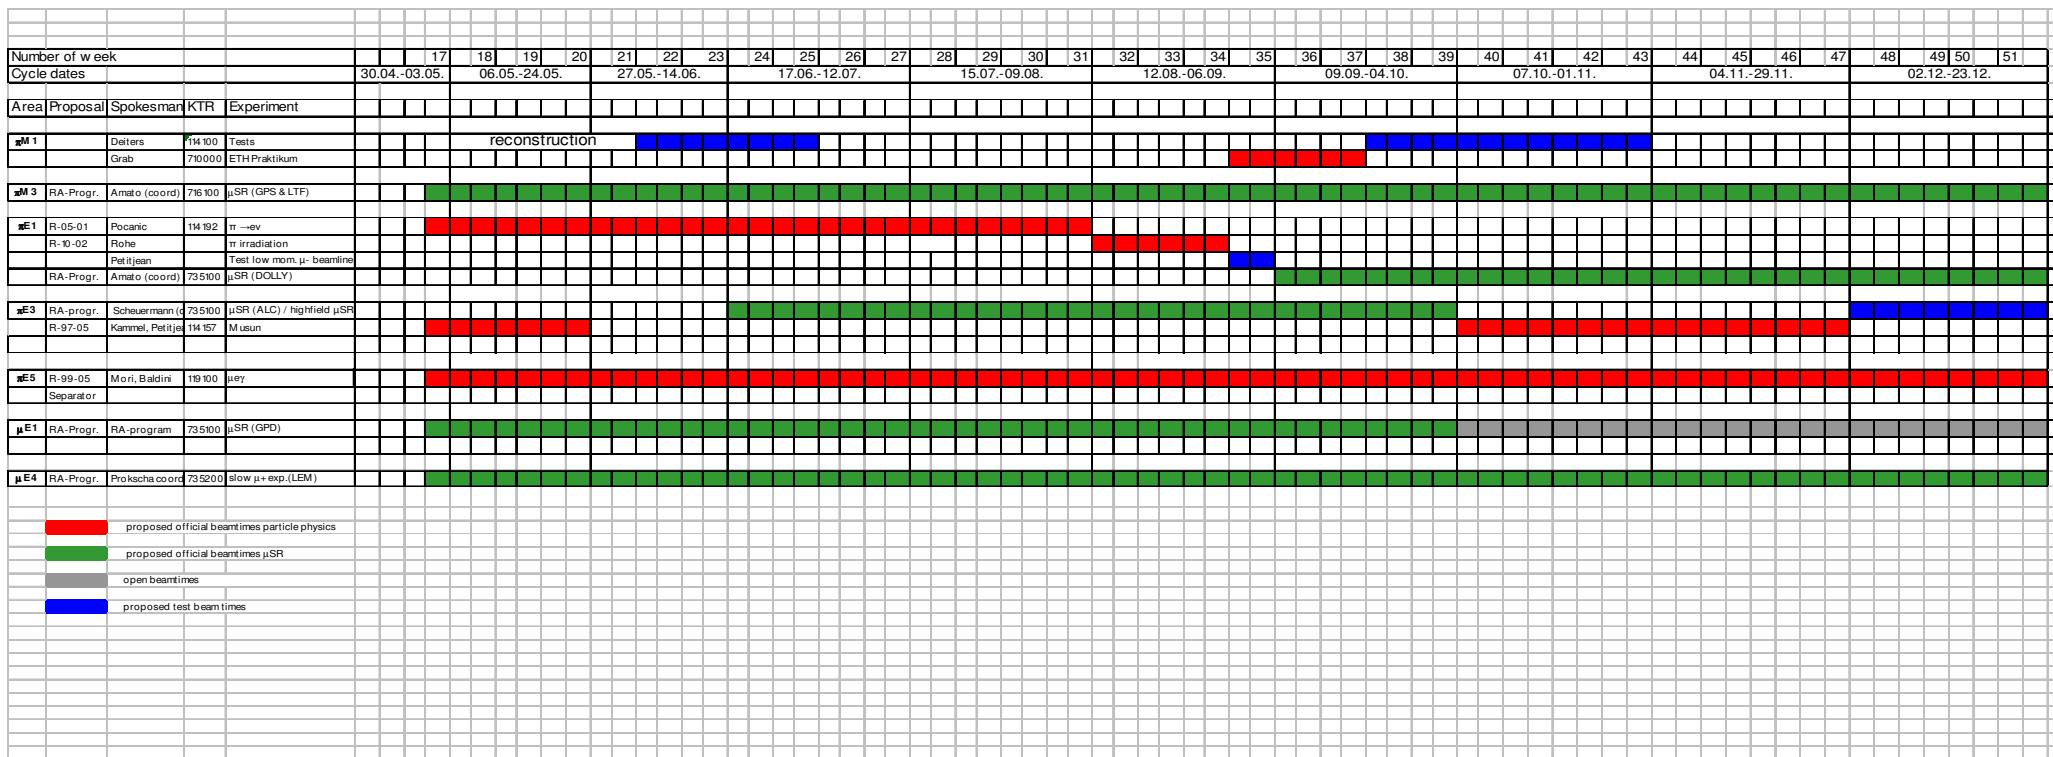

The next meeting BV42 is scheduled for February 16 - 18, 2011. The first day is reserved for reviews of μ ey and UCN experiments. The **deadline** for beam requests, new proposals and addenda is **January 17, 2011**. Users are requested to make electronic submissions of their documents (pdf files).

The dates for the next meeting BVRA-2011 are not fixed yet.
