**MINUTES "BESCHLUSSKONFERENZ"
OF THE USERS MEETING BV 42 AT PSI
February 16 - 18, 2011**

present: Dr. K. Clausen (Chairman)
Dr. C. Hoffman
Prof. K. Kirch
Dr. C. Petitjean (Secretary)
Dr. Th. Prokscha
Dr. M. Seidel

excused: Prof. J. Mesot
Prof. C. Bernhard
Dr. R. Horisberger
Prof. E. Morenzoni
Dr. L. Rivkin

1. Approval of Experiments

The recommendations of the BVR research committee and the μ SR research committee are acknowledged (see minutes and lists in the appendix).

New Proposals

R-11-01.1 Test Existence of Pion-Muon Decay Asymmetry (PMAX)

J.S. Conway, UC Davis, W.A. Perkins, Auburn, M.J. Miller, UW Seattle USA
Rejected, see committee minutes.

2. Beam schedules

The 600 MeV ring accelerator is scheduled for 34 weeks of high intensity beam production from April 11 to December 02, 2011 (see beam operations schedule 2011 on <http://abe.web.psi.ch/schedule/yearplan2011.php> and research schedule in the appendix).

As usual, the beam schedules 2011 will be regularly updated and are displayed on the internet:

- http://ltp.web.psi.ch/accelerator_and_beams/schedule.pdf for the general schedule
- <http://imu.web.psi.ch/facilities/schedules.html> for μSR details

3. Use of the UCN Facility

After the successful commissioning with first ultra cold neutrons in December 2010, the UCN facility still needs a prolonged period of tests and trial operations where cold neutrons will only be available for short tests on a day to day basis. From August 2011 on it is hoped that some scheduled shifts can be allocated, and in the last 2 months (October-November 2011) a regular production may be initiated depending on the success of the preceding trial operations.

For the other users of the 600 MeV cyclotron, announcements and signals will be provided early on, such that they can test whether the UCN operation might influence their experiments.

4. Extended π E1 area

As announced last year, the π E3 beam will no longer be available for particle physics from 2012 on. In the meantime a successful test was made of the π E1 beam demonstrating its feasibility for experiments with low energy muons. To accommodate sufficient space for a beamline that includes separators, kickers and large experimental setups, an extension of the π E1 area toward the former NE-B low energy area is now in preparation. The planning will be such that the DOLLY μ SR facility can alternatively be operated as in the past.

5. Varia

The next meeting BV43 is scheduled for February 21- 23, 2012. The first day is reserved for reviews of μ ey and UCN experiments. The **deadline** for beam requests, new proposals and addenda is **January 23, 2012**. Users are requested to make electronic submissions of their documents (pdf files).

The dates for the next meeting BVRA-2011 are not fixed yet.
